

Our company has been producing handmade pasta since 1926 and is located in Lari, a small village in the Era valley famous for its cherries and especially for our products.

All the members of our family work in the "pasta" factory and combine long years of professionalism with their passion for keeping up the Italian craft tradition of making pasta.

Today we have decided to launch a new product on the market to attract new consumers.

Our pasta is in the shape of small animals, cars and dolls and is created to convince mothers to buy it for their children. It is available in many colours and its taste is really genuine because we don't use preservatives and colorants in order to protect children's health.

Our pasta is made by slowly kneading the best durum-wheat with cold water. The result is a tasty and porous pasta which allows all kinds of sauce to be absorbed.

Our product is packed in a container which can be filled in wherever pasta is over.

We have decided to promote our product online for the benefit of our consumers who live near Lari but also for the benefit of our foreign consumers who can buy our excellent pasta without moving from their houses.

Our price-tag is cheaper than the other competitors on the market because our company is smaller and we have fewer expenses.

Therefore we hope that our range of products will be successful and our authenticity will win.

We invite you to come to Lari, near Pisa: we will show you how we produce pasta.
